

## WEBSITE

### Content

1. Use the your photo, superhero, and text from labs 1, 2 & 3.
2. Include a background image of your choice (in CSS).
3. Use completed labs to assist in creating this project.

### Design

1. Design areas controlled with CSS only (navcontainer, main, footer, etc.)
2. Text controlled using CSS only.
3. You can choose the colors and images.

### Technical

1. Title each HTML document "Yourname WEBSITE - Home" etc.
2. Width of 755 pixels
3. Navigation Bar with rollovers using CSS only - no Java
4. External CSS only - NO inline or internal styles.
5. Auto-center WEBSITE on screen (see lab 3).

### NAME

### URL

### ASSIGNMENT

# A1

### DUE see syllabus

### POINTS 200

~14% of overall grade

### OBJECTIVES

Create a one-page website that promotes your work this quarter using HTML, CSS, images, and links to your completed assignments & reading projects. You are free to add any extras that you find necessary.

### RESOURCES

#### Net Storage Setup

<http://www.ewu.edu/x982.xml>

#### NetStorage Web Space

<http://techfee.ewu.edu/websites/>

#### Student URL

<http://studentweb.ewu.edu/username/>

#### NetStorage FTP Access

 host: [netstorage.ewu.edu](http://netstorage.ewu.edu)

#### Your Student FTP

 host: [netstorage.ewu.edu](http://netstorage.ewu.edu)  
 user: \_\_\_\_\_

#### W3 Schools

<http://www.w3schools.com/>

## WEBSITE - part 1

### Basic HTML

1. Use your completed lab2 files ([lab2.html](#), [myPhoto2.html](#), & [superhero2.html](#)) as a reference. Copy/paste content to save time.
2. Create 3 pages ([index.html](#), [labs.html](#), & [readingProjects.html](#)) using the following code:

```
<!DOCTYPE html>
<html>
  <head>
    <!-- modify each content=" " to reflect the website project -->
    <meta name="description" content="a cool webpage about... you fill in" />
    <meta name="keywords" content="HTML, tags, education, publishing" />
    <meta name="author" content="Student Name" />
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8" />

    <!-- edit line below to reflect the precise page shown -->
    <title>Your Name - Home </title>
  </head>

  <body>

  </body>
</html>
```

3. **Edit content to match examples** on [page 3](#). Pages [labs.html](#) and [readingProjects.html](#) do not require images at this time.
4. Use actual file names for all future links. This will make them behave like a link. If you click on them, pages will not be found - that is OK for now.
5. Upload all 3 files to their proper NetStorage folder places (see [pages 8 and 9](#)) using FTP software.
6. View online, your new HTML pages @ <http://studentweb.ewu.edu/username>  
Instead of seeing a list of folders, your computer should automatically open the [index.html](#) file. Check to make sure all links work as they should.

### Expectations

My expectations for this course are...

1. That all students would be eager to participate and learn course content.
2. That everyone would make this class a priority by spending adequate time studying, preparing materials, and regularly attending class.
3. That each student would leave this class knowing significantly more about InDesign and the desktop publishing (DTP) industry as a whole.

My experience with InDesign and DTP are...

I have a BA in Graphic Communication, a MS in Computer Arts Instruction, 4 years industry experience in print and advertising, and have been freelancing since 2000.

My future career desires are...

I would like to continue teaching design-based courses to eager, young minds.

I see myself using this course content in my future career as...

Day-to-day creation of documents and designs

## WEBSITE - part 2

### CSS

1. Open the [index.html](#), [labs.html](#), and [readingProjects.html](#) files in an HTML editor.
2. Use your completed lab3 files ([lab3.html](#), [myPhoto3.html](#), & [superhero3.html](#)) as a reference.
3. Duplicate the [global.css](#) lab 3 file and place it in website folder next to [index.html](#)
4. **Add HTML tags (id, class, div) to match the examples in order for the CSS to work** on [pages 5 and 6](#).
5. Add completed lab #3 screen capture image ([lab3-ScreenCapture.jpg](#)) to the [labs.html](#) file.
  - (win) "Print Screen" button
    - create a NEW file in Photoshop and paste (CTRL+V).
    - Save as .png
  - (mac) command+shift+4 | will automatically save as .png
6. Create the [group.html](#) page to match the examples on [pages 5 and 6](#).
7. Edit the colors (backgrounds, text, etc.) in the [global.css](#) file to better reflect you
8. Add a background image in the CSS [global.css](#) file
9. Upload all files to their proper NetStorage folder places (see [pages 8 and 9](#)) using FTP. Override the existing older files with these new ones.
10. View online, your new HTML pages @ <http://studentweb.ewu.edu/username>  
Instead of seeing a list of folders, you computer should automatically open the [index.html](#) file. Check to make sure all links work as they should.

### Best Designs:

Choose your favorite **2** WEBSITE projects. Why did you choose them? Explain.
